GUIPING MEI

Fashion and accessories designer based in Milan, currently completing an MA in Fashion Design at NABA, with a BA in Product Design focused on accessories and bags. My practice combines womenswear development, accessory design, leathercraft, pattern cutting, material experimentation and digital prototyping. I work across garments, bags and wearable objects, translating concept research into tangible, technically resolved outcomes.

2020.9 – 2024.7
Beijing Institute of Fashion Technology
B.A. in Product Design (Accessory & Bag Focus)

2024.10 – 2026.12
MILANO NABA-Nuova Accademia delle Belle Arti
M.A. in Fashion Design

SKILLS:

Accessory Development

Bag design, pattern development, prototyping, material research, product development

Leathercraft & Making

Leather cutting, forming, carving, dyeing, hand stitching, machine sewing, edge finishing, strap making, hardware assembly

Fashion & Garment Development

Fashion Illustration, Technical Flats, Draping, Pattern Cutting, Toile & Fitting, Garment Construction

3D & Digital Prototyping

Rhino, CLO 3D, Blender, Cinema 4D, Creo, CAD

Visual Communication

Adobe Photoshop, Illustrator, InDesign, Premiere Pro

STAY ON STAGE

Fashion Design / Womenswear Collection Development

Stay on Stage explores performance, gender expression and body transformation through a womenswear collection combining structured tailoring, corsetry, draping and layered surfaces. Drawing from drag culture and Japanese cinematic references, the project develops a visual language based on the contrast between structure and softness, concealment and exposure.

Collection Development / Styling / Garment Construction / Campaign Direction

THE SENSITIVE MONSTEROLOGY

"A visual archive of hyper-perceived sensations."

From the perspective of highly sensitive individuals, this series explores emotional overload and energy drain in social environments. By conceptualising emotions as "invisible monsters," I translate heightened sensations into silhouettes, textures and protective forms. Each material becomes part of a monster's skin, embodying inner vulnerability and heightened sensory awareness.

Fashion Design / Styling / Material Exploration / Accessories

RESEARCH & CONCEPT

FROM CROWD TO MONSTERS

Highly sensitive perception turns ordinary social environments into sources of pressure, noise and emotional residue. I began by observing crowds, fragmented gazes and traces of human presence, then translated these invisible sensations into distorted bodies, protective forms and sensory "monsters".

SENSORY OVERLOAD

Movement, proximity and overlapping bodies create a visual sense of emotional noise.

CROWDS

Pressure / Overload

DISTORTION

Blurred reality

THE EYES

Multiple gazes

SCARECROW

Empty body

TRACES

Residual emotions

IMPRINT

Touch / Residual presence

MONSTER LANGUAGE

Eyes, ears, hands and fragmented body parts become exaggerated sensory organs, visualising a body unable to filter external signals.

ACCUMULATION
DISTORTION
EXPOSURE
PROTECTION

FACE & IDENTITY TESTS

Layering, masking and obscuring the face explore altered identity and the tension between visibility and protection.

05 HEADPIECE DEVELOPMENT

Clay was used to define the ear forms, followed by masking-tape moulding to develop the pattern pieces. The felt shells were then stitched and secured to the headpiece with magnetic snaps.

06 WEAVING DEVELOPMENT & DETAILING

After sketching the design and finalising the dimensions, I tested the structure on a small sample. The initial version used only yarn; later iterations incorporated metal and glass beads, with additional detailing developed around the waist.

EDITORIAL OUTCOME

SEROTONIN V: SELVES

Draping Project / Fashion Design & Draping

“Serotonin V: The Fragmented Knight” is inspired by the sonic world of Yeule, exploring the internal collapse and spiritual resilience of a broken female knight. Through five emotional states — anger, sadness, indifference, fear, and arrogance — the collection uses modular draping, layered construction and custom-engineered prints to navigate the boundary between futuristic surrealism and emotional deconstruction, symbolizing the journey of rebuilding a shattered self.

REGENERATIVE FLOW

Yoga Apparel & Print Design

This collaborative project with **ADITI**, titled 'Regenerative Flow', explores the relationship between movement, continuity, and the body through yoga apparel. Inspired by natural energy cycles, flowing hair, wrapped fabric, and the infinite geometry of the Möbius ring, the collection translates ideas of regeneration and balance into fluid silhouettes and organic line-based prints. By combining lightweight forms, layered draping, and rhythmic surface patterns, the project connects the meditative qualities of yoga with a contemporary fashion language, creating garments that move naturally with the body while expressing a sense of freedom, softness, and continuous transformation.

Help Me Out a Bit!

STRUCTURE, GATHERING & ADJUSTMENT

A family of bags developed through the contrast between structured leather frames and soft gathered textile volumes. A shared system of framing, gathering and drawcord adjustment creates a cohesive product language across different scales and carrying formats.

STRUCTURE / SOFTNESS / ADAPTABILITY

INSPIRATION

FROM SOCIAL EMOTIONS TO TANGIBLE FORM

The project began with the difficulty of expressing awkward emotions in face-to-face situations. I observed how people often use body gestures to relieve tension or hide their true feelings. These subtle actions became the starting point for a series of bag designs, translating emotional states into material form through gathering, compression and drawstring structures.

CORE FORMS & FAMILY DEVELOPMENT

1. REAL LIFE OBSERVATION

People often feel nervous, embarrassed or speechless in social situations. Emojis and online expressions have become a way to compensate for these difficult-to-express emotions.

EMOTIONAL GESTURES

2. BODY LANGUAGE

Gestures such as clenching, curling, hiding and wrapping reflect common physical reactions to emotional tension.

ABSTRACTED FORMS

3. FORM TRANSLATION

The gestures are simplified into abstract shapes, which are translated into bag structures through gathering, compression and drawstring techniques.

MATERIAL EXPLORATION

gathering
softness
flexibility

drawstring
adjustment
interaction

compression
deformation
movement

leather frame
structure
stability

MATERIAL RESPONSE

Soft textiles and structured leather create a balance between tension and stability, while drawstrings and gathering add adaptability and movement.

DESIGN LANGUAGE DEVELOPMENT

A SHARED STRUCTURAL SYSTEM TRANSLATED ACROSS DIFFERENT SCALES AND CARRYING FORMATS.

DESIGN SYSTEM

The gesture studies were translated into a product language built around framing, gathering and adjustment. A rigid leather frame provides structure, soft gathered volumes create flexibility, and adjustable drawcords allow for multiple carrying modes. This system is consistently applied across a family of bags, balancing stability and softness through a unified visual language.

KEY CONSTRUCTION

- 01 Structured leather frame
- 02 Integrated upper handle
- 03 Metal eyelet connection
- 04 Gathered textile body
- 05 Adjustable drawcord system
- 06 Reinforced leather attachment tabs

DESIGN DESCRIPTION

The Hero Bag combines a rigid horizontal leather frame with a soft gathered textile body. The drawcord system allows the volume to compress and shift, creating contrast between structure and movement. The prototype tests the frame as a signature element that can be extended across the wider product family.

HERO BAG — DEVELOPMENT & MAKING PROCESS

01 FORM DEVELOPMENT

Exploring structure, proportion and volume.

Initial sketches explored the relationship between a rigid horizontal frame and soft suspended volumes.

02 MATERIAL & GATHERING TESTS

Studying texture, movement and construction.

Gathering Test / Drawcord Manipulation

Gathering, compression and drawcord tests were used to study volume, movement and material behaviour.

03 PATTERN & MOCK-UP

Testing proportion and construction logic.

Pattern pieces (paper)

Cardboard mock-up

Pattern pieces and paper mock-ups were used to test proportion, frame geometry and attachment points before leather construction.

04 PROTOTYPE ITERATION

Refining details towards the final prototype.

Prototype 01

Prototype 02

Prototype 03

Successive prototypes refined frame proportion, handle placement, eyelet positioning and the relationship between rigid leather and soft textile volumes.

MINI CROSSBODY & PRODUCT FAMILY

ONE LANGUAGE, MULTIPLE FORMATS

MINI CROSSBODY

A compact interpretation of the Hero Bag.

The Mini Crossbody translates the Hero Bag's shared structural language into a smaller, more modular format, combining gathered textile volumes, leather framing and suspended drawstring elements.

Hero Bag

Mini Crossbody

Bucket bag

Vertical Tote — extended silhouette

SCULPTURAL MATERIAL RESEARCH

Healing Acupuncture

Healing Acupuncture explores sculptural leathercraft through leather forming, carving, hand stitching, copper and enamel work, and 3D-printed forms. Inspired by ideas of protection and healing, the project combines rigid and flexible materials to create expressive wearable accessories.

Leather forming & carving / Copper & enamel / 3D-printed forms / Hand stitching

HEALING ACUPUNCTURE — CONCEPT TO FORM

Translating emotional tension and physical healing into a sculptural accessory language.

01 EMOTIONAL BLOCKAGE

Internal tension / Emotional blockage / Knots

Emotional tension is visualised through knots, compression and internal blockage.

02 ACUPUNCTURE & MERIDIANS

Pressure points / Stimulation / Release

Acupuncture introduces a system of pressure, stimulation and release.

03 PHYSICAL RELEASE

Boxing / Movement / Physical release

Movement and physical contact introduce tension, swing, wrapping and release.

04 DESIGN TRANSLATION

From healing mechanisms to material language

Healing mechanisms become a material language of knotting, piercing, wrapping and tension.

KNOTTING PIERCING WRAPPING TENSION

These research cues form the basis of a tactile accessory language developed through leather forming, cord construction and metalwork.

SCULPTURAL FORM & MATERIAL DEVELOPMENT

Leather forming / Cord construction / Copper & enamel / Hand stitching

FORM DEVELOPMENT

A family of sculptural accessories developed through variations of wrapping, suspension, framing and tension.

03 MORPHOLOGICAL TRANSLATION

From character to form / Silhouette exploration / Structural experiments

04 ACCESSORY DIRECTION

Design iteration / 3D form studies / Material exploration

The selected forms were developed into wearable accessories through digital modelling, 3D prototyping and material experimentation.

ON-BODY APPLICATION

Clang & Clattered

Silk scarf print design

Clang & Clattered is a 90 x 90 cm silk scarf design developed through original motif creation, composition, and colourway exploration. Chains, sculptural metal forms, and insect-inspired elements are arranged into a structured central emblem and decorative border, creating a strong visual identity suitable for fashion accessory application. The project demonstrates a complete print-development process from motif design and layout refinement to colour variation and final presentation.

90 x 90 cm
Colour and motif development

KIMONO PLACEMENT PRINT DESIGN

This project develops a kimono-inspired placement print through the combination of metallic structures, insect motifs, and organic forms. The print was designed specifically around the garment pattern, with attention to symmetry, scale, body placement, and visual continuity across the front and back. The final design was produced through digital printing on stretch polyester fabric, demonstrating a complete process from theme development and motif composition to colour refinement and garment application.

Placement Print Design / Motif Development / Colour Development / Garment Layout / Digital Printing

Front

Back

RUST

Textile Surface Development & Screen Printing

Rust explores textile surface development through screen printing, foil application, burnout, knitting, and hand-applied details. The project applies graphic motifs across lace, stretch fabrics, and knitwear, combining print with texture, transparency, and layered construction. Through material testing and garment application, the project demonstrates a practical approach to textile development, from artwork creation and print experimentation to final styling and presentation.

Screen Printing / Foil / Burnout / Knitwear /
Surface Development / Garment Application

DISPEL

Accessory Design and Sound Therapy Interaction

DISPEL explores how wearable accessories, sound cues and rhythmic breathing can create moments of calm within experiences of anxiety and attachment-related stress. The project translates emotional and bodily responses into three interactive wearable concepts, combining sound interaction, 3D printing and leathercraft. Rather than functioning as medical devices, the pieces explore how tactile objects and rhythmic sensory cues can support personal rituals of grounding and self-regulation.

Accessory Design / Sound Therapy Interaction /
Intimacy / Anxiety and Attachment / Perfectionism

Main: Dyed smooth-grain cowhide leather
Secondary: Silk

AI-DRIVEN CREATIVE DIRECTION

Fashion communication, brand campaigns and experimental visual art

This body of work explores the intersection of artificial intelligence, fashion, visual culture, and social commentary through a series of experimental creative projects. Moving between speculative installation, AI-generated imagery, fashion campaigns, and brand collaborations, the work investigates how emerging technologies can function not simply as production tools, but as methods of storytelling, provocation, and image-making. From examining the normalization of violence through material and visual experimentation to developing unconventional campaign narratives for Martine Rose, each project combines concept development, styling, art direction, and AI-assisted production to construct distinctive visual worlds. Together, the projects reflect an interdisciplinary approach to contemporary fashion communication, where technology, cultural research, and creative direction converge.
